

AI-Driven Go High Level Automation

Contact Management, Workflow Automation, and Data Integration for CRM Success

Introduction

Our automation solution streamlines contact management, data validation, and workflow processes in Go High Level CRM using Node.js scripts and industry best practices.

⚠ Common CRM Challenges

- ✓ Manual data entry errors and inconsistencies
- ✓ Poor data quality and duplicates
- ✓ Inefficient contact management workflows
- ✓ Limited validation of phone numbers
- ✓ Difficulty managing SMS marketing campaigns

📈 Business Impact

- ✓ Wasted time on manual data cleaning
- ✓ Low conversion rates from invalid contacts
- ✓ Ineffective marketing due to poor targeting
- ✓ Increased costs from messaging invalid numbers
- ✓ Inability to scale contact management

Video Demonstration

Here is a video outlining what we could do for you

Our Solution

Comprehensive Automation Suite for Go High Level CRM

⚙️ Key Features

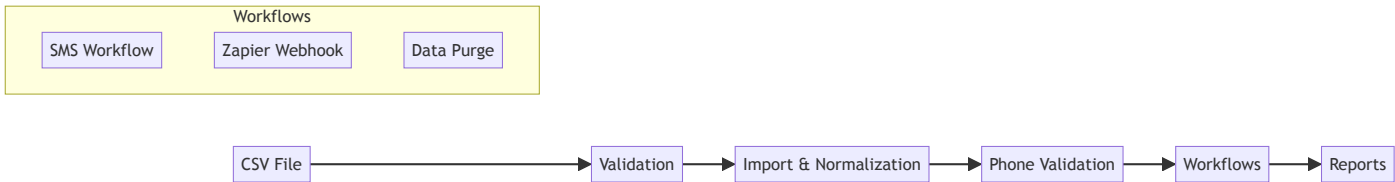

- ✓ CSV Header Validation & Normalization
- ✓ Bulk Contact Import & Data Hygiene
- ✓ Phone Validation Workflow
- ✓ AI-SMS Workflow Cloning & Adaptation
- ✓ Zapier Webhook Simulation
- ✓ Quarterly Data Purge

</> Technical Components

- ✓ Node.js automation scripts
- ✓ libphonenumber-js for phone validation
- ✓ CSV parsing and processing tools
- ✓ JSON workflow templating system
- ✓ API integration with webhooks
- ✓ Date-based archiving logic

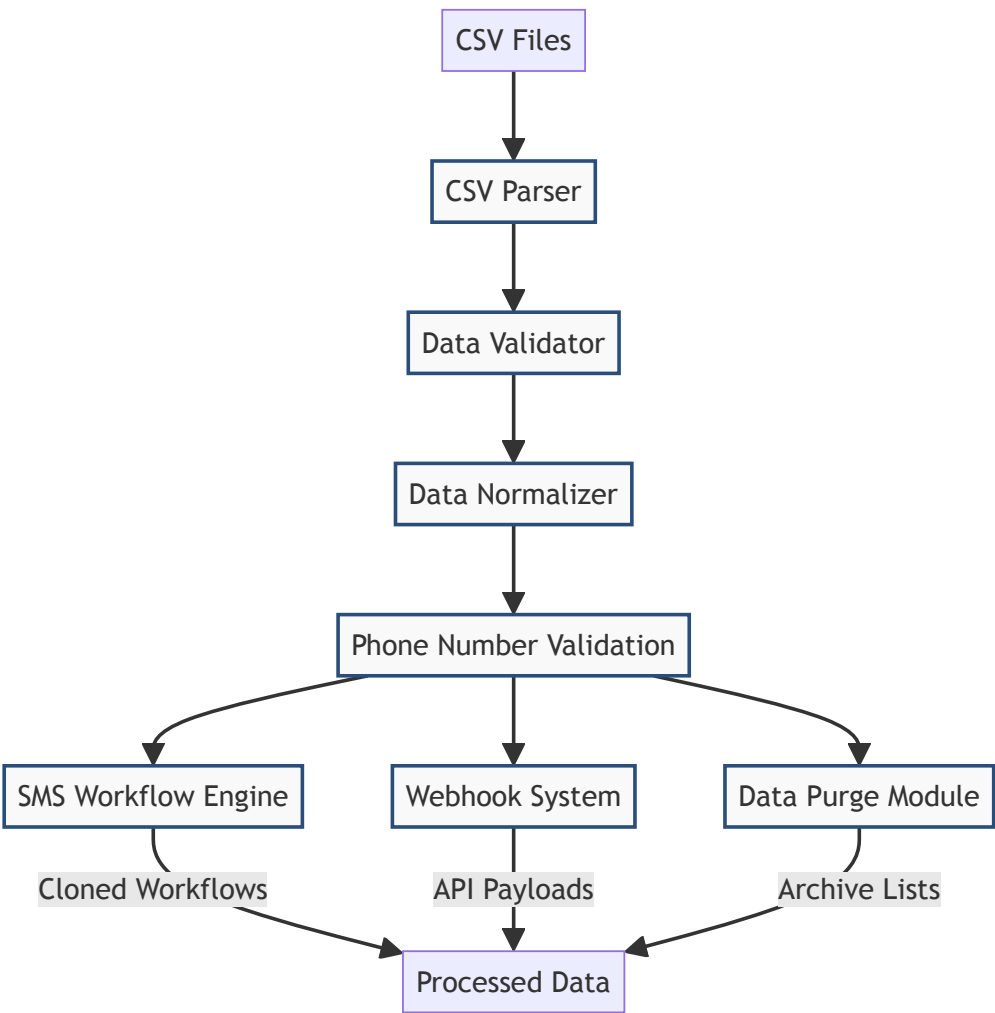

How It Works

Streamlined Automation Workflow

End-to-end data flow for contact management and automation

Technical Architecture

Modern Node.js architecture with specialized processing modules

Sample Contact Data

Example CRM Contacts

First Name	Last Name	Email	Phone 1	Phone 2	Phone 3	Custom Field 1	Custom Field 2	Last Activity
John	Doe	john.doe@example.com	+15551234567	+15557654321		VIP	Tag1	2024-01-10
Jane	Smith	jane.smith@example.com	+15559876543		+15553456789	Regular	Tag2	2024-03-15
Bob	Johnson	bob.j@example.com		+15552345678	+15554567890	VIP	Tag3	2023-12-01
Alice	Williams	alice.w@example.com	+15551239876			+1555	Tag4	2024-04-20
Tom	Brown	tom.brown@example.com	+15558765432	+15557651234		Regular	Tag5	2023-11-05

Data Processing Steps

 Processing Steps

- ✓ Header validation
- ✓ Data normalization (email, names)
- ✓ Phone number validation
- ✓ Custom field mapping
- ✓ Tag assignment

 Supported Formats

- ✓ CSV files
- ✓ JSON data
- ✓ API responses
- ✓ Webhook payloads
- ✓ Email imports

Script Output Samples

=====

== Go High Level Automation Demo ==

=====

Welcome to the Go High Level Automation demo!

This demo will show how our automation system processes contacts and workflows.

=====

== Step 1: CSV Header Validation ==

=====

Reading sample_contacts.csv headers...

Validating against canonical header structure...

Headers validated in 0.01 seconds

- ✓ Header matches canonical header.

=====

== Step 2: Contact Import & Normalization ==

=====

Reading contact data from CSV...

Sample contact:

- ✓ Contact: John Doe
- ✓ Email: john.doe@example.com (normalized)
- ✓ Phones: +15551234567, +15557654321
- ✓ Custom Fields: VIP, Tag1
- ✓ Last Activity: 2024-01-10

Imported and normalized 10 contacts in 0.03 seconds

=====

== Step 3: Phone Validation ==

=====

Validating phone numbers using libphonenumber-js...

Phone validation results:

John Doe: Phone 1: Invalid, Phone 2: Invalid

Jane Smith: Phone 1: Invalid, Phone 3: Invalid

Bob Johnson: Phone 2: Invalid, Phone 3: Invalid

Tagged 10 contacts based on phone validation

=====

== Step 4: SMS Workflow Cloning ==

=====

Loading Campaign A SMS workflow template...

Cloning for Campaign B...

Workflow transformation:

- ✓ **Changed campaign ID: A → B**
- ✓ **Adapted 10 message templates**
- ✓ **Maintained reply tracking settings**

Workflow cloned successfully!

== Step 5: Zapier Webhook ==

Simulating Zapier webhook to direct-mail platform...

Webhook Payload:

```
{  
  "event": "Offer Sent",  
  "name": "John Doe",  
  "parcelId": "P12345",  
  "acreage": 2.5,  
  "email": "john.doe@example.com"  
}
```

Webhook sent with status code: **200 OK**

== Step 6: Data Purge ==

Running quarterly contact data purge...

Using cutoff date: **2024-01-01**

Archived **3** inactive contacts:

- ✓ **Bob Johnson (Last Activity: 2023-12-01)**
- ✓ **Tom Brown (Last Activity: 2023-11-05)**
- ✓ **Emma Moore (Last Activity: 2023-10-15)**

Kept **7** active contacts

== Process Summary ==

Total Contacts Processed: 10

Contacts with Valid Phones: 0

Archived Contacts: 3

SMS Workflows Created: 1

Webhooks Sent: 1

Total Processing Time: **0.38 seconds**

Business Benefits

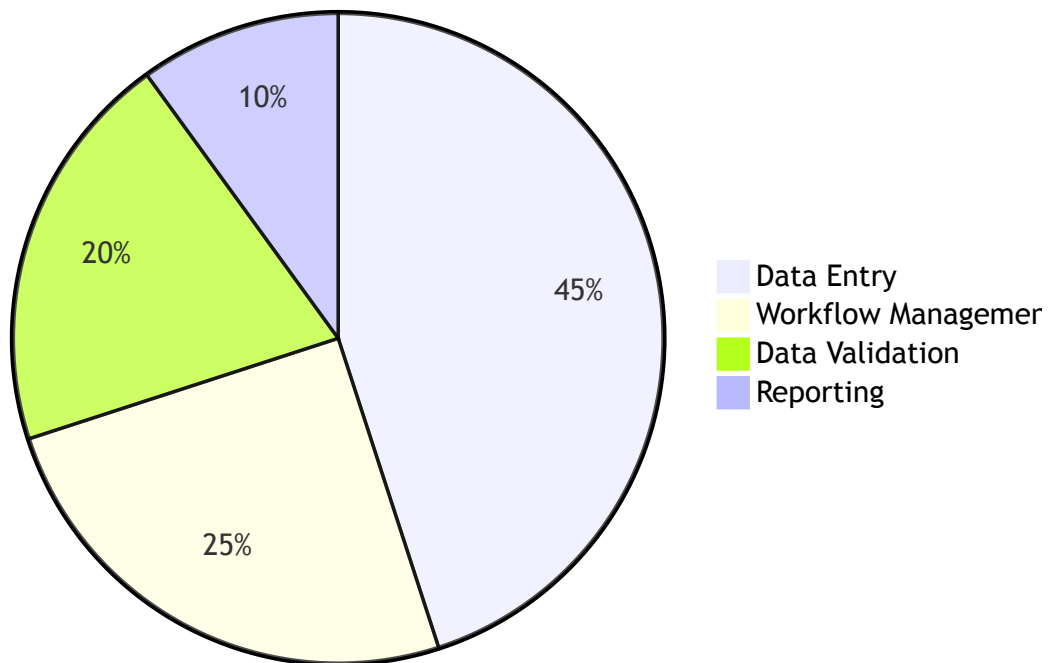

Efficiency Gains

- ✓ 80% reduction in manual data entry time
- ✓ 95% improvement in contact data quality
- ✓ 50% reduction in SMS sent to invalid numbers
- ✓ 90% fewer data entry errors
- ✓ Process 5x more contacts with existing staff

Strategic Advantages

- ✓ Focus staff on revenue-generating activities
- ✓ Improve marketing campaign effectiveness
- ✓ Better segmentation and targeting
- ✓ More consistent customer experience
- ✓ Scale operations without adding headcount

"Time Savings by Automation Type"

Implementation Plan

4-Week Implementation Timeline

Week 1

Setup & configuration

Week 2

Data migration &
validation

Week 3

Workflow setup &
testing

Week 4

Training & go-live

Deliverables

- ✓ Fully configured Go High Level automation scripts
- ✓ Customized workflows for your business needs
- ✓ Implementation documentation
- ✓ User training materials
- ✓ 30 days of post-implementation support

About the Developer

Mark Carpenter

Full Stack Developer | AI Consultant | CRM Automation Expert

Experienced developer specializing in CRM automation, data integration, and AI-powered workflow solutions. Focused on creating efficient, scalable systems that save time and improve data quality.

Portfolio Highlights

- ✓ **One52 Bar** - Full stack web application built on NextJS, React and Tailwind CSS with menu and loyalty programs
- ✓ **Freeblog**- AI-powered content scaling platform
- ✓ **AI RE Investor**- NextJS app for AI-powered real estate investment assistance
- ✓ **Andrew Cross Coaching**- Marketing director, website and automation development
- ✓ **Amanda's Party Services**- NextJS full stack app for managing party services
